PRESSURE Trial Screening & enrolment flowchart
For patients identified by the retrieval / transport teams

Is the patient being transported to PICU and on vasoactive drugs?

- Yes: Consider screening for eligibility
  - SOP 003: Does the patient meet all inclusion criteria and no exclusion criteria?
    - Yes: Contact appropriately trained staff member to confirm eligibility
      - Retrieval team must complete the first section of the randomisation form (hard copy) for each patient
          - Appropriately trained staff member must randomise the patient into the trial ASAP, but no longer than 6 hours from initiation of vasoactive drugs.
          - Complete the randomisation form (hard copy) for each patient and record the randomisation details as generated by the randomisation system.
          - Appropriately trained staff member must sign off the randomisation form and ensure that this is passed onto the receiving PRESSURE site.
    - No: Do not consider for PRESSURE

- No: Do not consider for PRESSURE

Randomise via phone or web
  - SOP 004: If the site you are transporting to is also participating in Oxy-PICU, consider patients on vasoactive drugs for enrolment to PRESSURE only after checking they were not previously enrolled into Oxy-PICU. Co-enrolment with Oxy-PICU is not permitted.

If the patient is put on vasoactive drugs during PICU stay, site research team should re-screen.

Site team must record the details from the randomisation form received from the retrieval team into the screening & enrolment log and retain the randomisation form in the ISF.
